The following document contains information on Cypress products. Although the document is marked with the name "Spansion" and "Fujitsu", the company that originally developed the specification, Cypress will continue to offer these products to new and existing customers.

Continuity of Specifications
There is no change to this document as a result of offering the device as a Cypress product. Any changes that have been made are the result of normal document improvements and are noted in the document history page, where supported. Future revisions will occur when appropriate, and changes will be noted in a document history page.

Continuity of Ordering Part Numbers
Cypress continues to support existing part numbers. To order these products, please use only the Ordering Part Numbers listed in this document.

For More Information
Please contact your local sales office for additional information about Cypress products and solutions.

About Cypress
Cypress (NASDAQ: CY) delivers high-performance, high-quality solutions at the heart of today's most advanced embedded systems, from automotive, industrial and networking platforms to highly interactive consumer and mobile devices. With a broad, differentiated product portfolio that includes NOR flash memories, F-RAM™ and SRAM, Traveo™ microcontrollers, the industry's only PSoC® programmable system-on-chip solutions, analog and PMIC Power Management ICs, CapSense® capacitive touch-sensing controllers, and Wireless BLE Bluetooth® Low-Energy and USB connectivity solutions, Cypress is committed to providing its customers worldwide with consistent innovation, best-in-class support and exceptional system value.

Single Serial Input PLL Frequency Synthesizer On-chip 2.5 GHz Prescaler

MB15E07SL

■ DESCRIPTION

The FUJITSU SEMICONDUCTOR MB15E07SL is a serial input Phase Locked Loop (PLL) frequency synthesizer with a 2.5 GHz prescaler. The 2.5 GHz prescaler has a dual modulus division ratio of 32/33 or 64/65 enabling pulse swallowing operation.

The supply voltage range is between 2.4 V and 3.6 V. The MB15E07SL uses the latest BiCMOS process, as a result the supply current is typically 3.5 mA at 2.7 V. A refined charge pump supplies well-balanced output currents of 1.5 mA and 6 mA. The charge pump current is selectable by serial data.

■ FEATURES

- High frequency operation: 2.5 GHz Max
- Low power supply voltage: V_{CC} = 2.4 to 3.6 V
- Ultra Low power supply current: I_{CC} = 3.5 mA Typ (V_{CC} = Vp = 2.7 V, Ta = +25°C, in locking state)
  I_{CC} = 4.0 mA Typ (V_{CC} = Vp = 3.0 V, Ta = +25°C, in locking state)
- Direct power saving function: Power supply current in power saving mode
  Typ 0.1 µA (V_{CC} = Vp = 3.0 V, Ta = +25°C), Max 10 µA (V_{CC} = Vp = 3.0 V)
- Dual modulus prescaler: 32/33 or 64/65
- Serial input 14-bit programmable reference divider: R = 3 to 16,383
- Serial input programmable divider consisting of:
  - Binary 7-bit swallow counter: 0 to 127
  - Binary 11-bit programmable counter: 3 to 2,047
- Software selectable charge pump current
- On-chip phase control for phase comparator
- Operating temperature: Ta = –40 to +85°C
- Pin compatible with MB15E07, MB15E07L

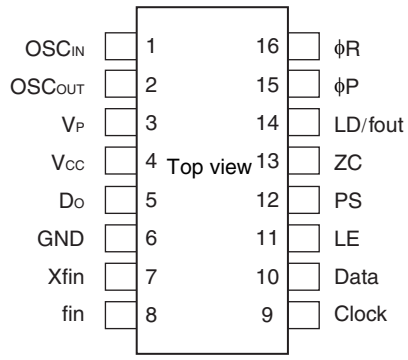
FUJITSU

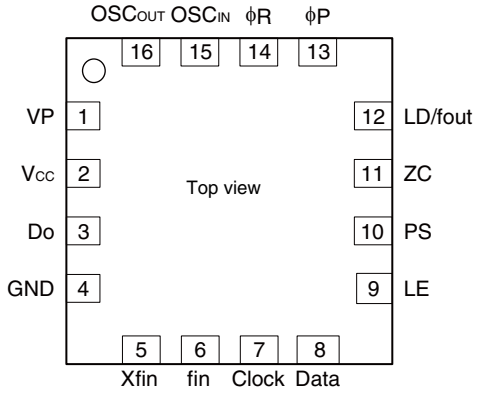
■ PIN ASSIGNMENTS

16-pin SSOP



(FPT-16P-M05)

16-pin QFN

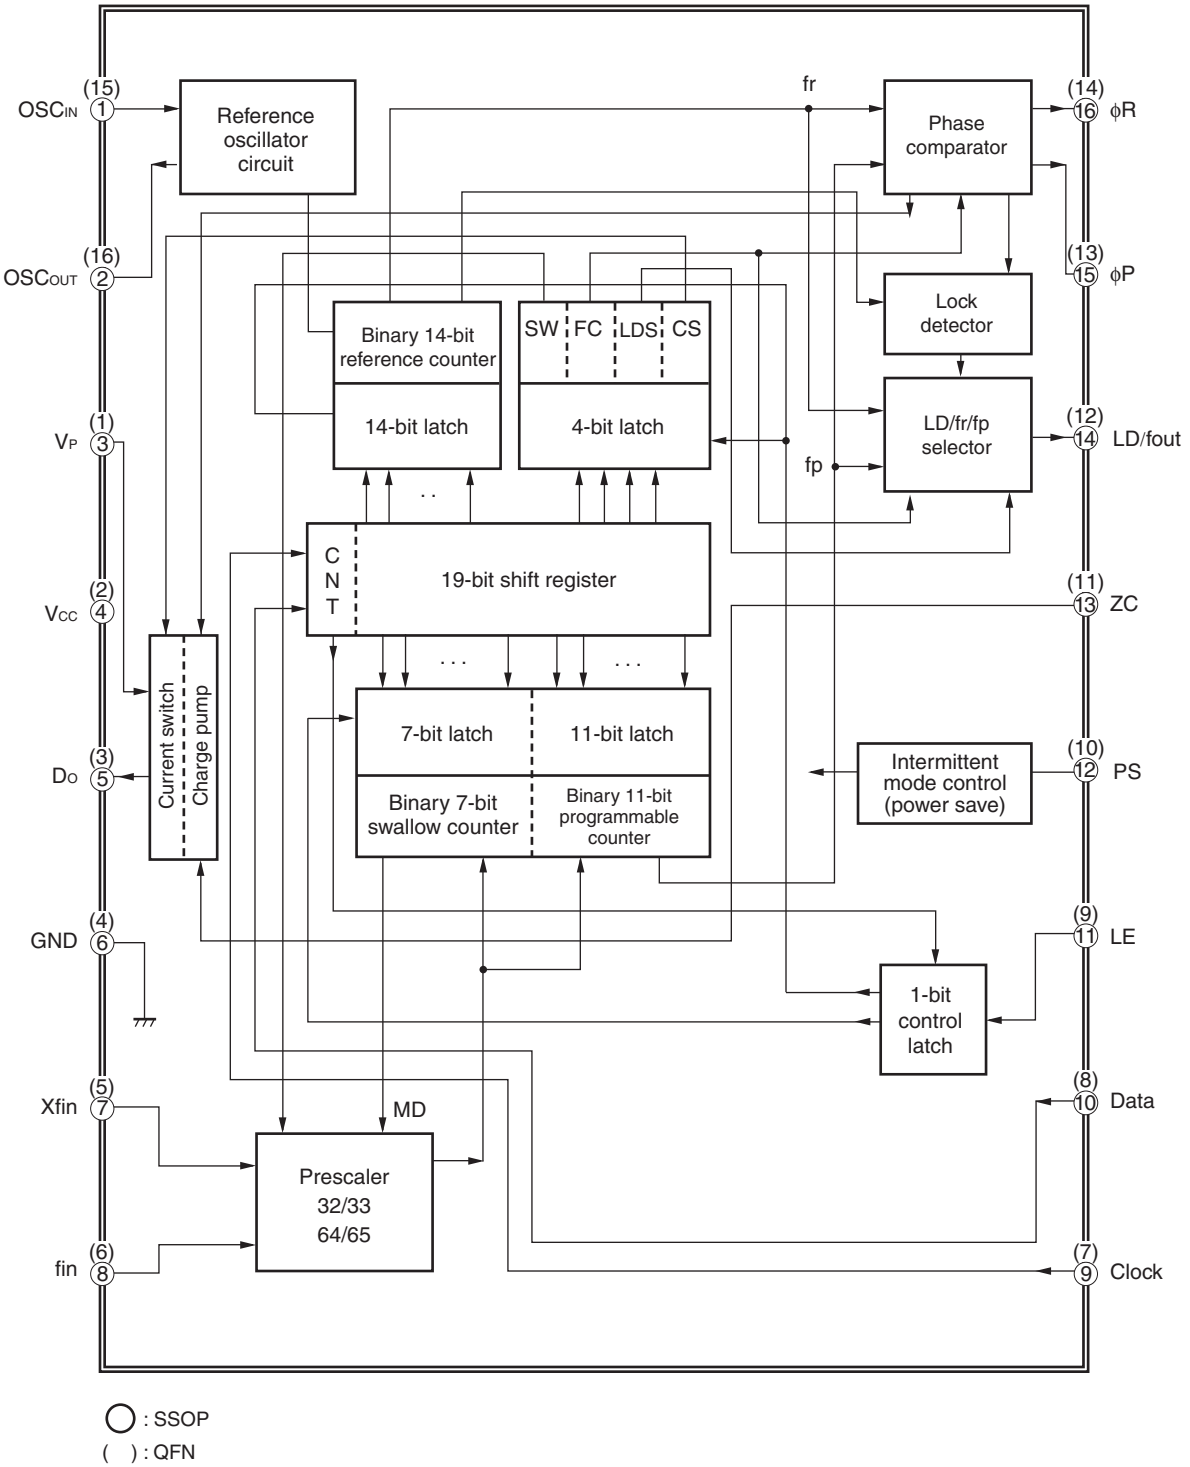


(LCC-16P-M69)

■ PIN DESCRIPTIONS

Pin no.		Pin name	I/O	Descriptions
SSOP	QFN			
1	15	OSC_{IN}	I	Programmable reference divider input. Connection to a TCXO.
2	16	OSC_{OUT}	O	Oscillator output.
3	1	V_P	–	Power supply voltage input for the charge pump.
4	2	V_{CC}	–	Power supply voltage input.
5	3	D_O	O	Charge pump output. Phase of the charge pump can be selected via programming of the FC bit.
6	4	GND	–	Ground.
7	5	Xfin	I	Prescaler complementary input, which should be grounded via a capacitor.
8	6	fin	I	Prescaler input. Connection to an external VCO should be done via AC coupling.
9	7	Clock	I	Clock input for the 19-bit shift register. Data is shifted into the shift register on the rising edge of the clock. (Open is prohibited.)
10	8	Data	I	Serial data input using binary code. The last bit of the data is a control bit. (Open is prohibited.)
11	9	LE	I	Load enable signal input. (Open is prohibited.) When LE is set high, the data in the shift register is transferred to a latch according to the control bit in the serial data.
12	10	PS	I	Power saving mode control. This pin must be set at “L” at Power-ON. (Open is prohibited.) PS = “H”; Normal mode PS = “L”; Power saving mode
13	11	ZC	I	Forced high-impedance control for the charge pump (with internal pull up resistor.) ZC = “H”; Normal Do output. ZC = “L”; Do becomes high impedance.
14	12	LD/fout	O	Lock detect signal output (LD)/phase comparator monitoring output (fout). The output signal is selected via programming of the LDS bit. LDS = “H”; outputs fout (fr/fp monitoring output) LDS = “L”; outputs LD (“H” at locking, “L” at unlocking.)
15	13	ϕP	O	Phase comparator N-channel open drain output for an external charge pump. Phase can be selected via programming of the FC bit.
16	14	ϕR	O	Phase comparator CMOS output for an external charge pump. Phase can be selected via programming of the FC bit.

■ BLOCK DIAGRAM



■ ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Rating		Unit	Remark
			Min	Max		
Power supply voltage	V_{CC}	–	–0.5	4.0	V	
	V_P	–	V_{CC}	6.0	V	
Input voltage	V_I	–	–0.5	V_{CC} + 0.5	V	
Output voltage	V_O	Except Do	GND	V_{CC}	V	
	V_O	Do	GND	V_P	V	
Storage temperature	Tstg	–	–55	+125	°C	

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Value			Unit	Remark
		Min	Typ	Max		
Power supply voltage	V_{CC}	2.4	3.0	3.6	V	
	V_P	V_{CC}	–	5.5	V	
Input voltage	V_I	GND	–	V_{CC}	V	
Operating temperature	Ta	–40	–	+85	°C	

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

■ ELECTRICAL CHARACTERISTICS

(Continued)

(Continued)

*1 : Conditions; fosc = 12 MHz, Ta = +25°C, in locking state.

*2 : $V_{CC} = V_P$ = 3.0 V, fosc = 12.8 MHz, Ta = +25°C, in power saving mode

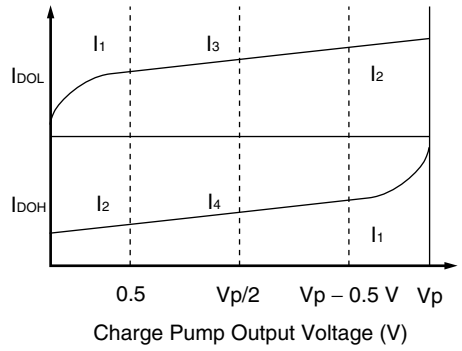
*3 : AC coupling. 1000 pF capacitor is connected under the condition of Min operating frequency.

*4 : The symbol "–" (minus) means direction of current flow.

*5 : $V_{CC} = V_P$ = 3.0 V, Ta = +25°C $(|I_3| - |I_4|) / [(|I_3| + |I_4|) /2] \times 100(\%)$

*6 : $V_{CC} = V_P$ = 3.0 V, Ta = +25°C $[(|I_2| - |I_1|) /2] / [(|I_1| + |I_2|) /2] \times 100(\%)$ (Applied to each I_{DOL}, I_{DOH})

*7 : $V_{CC} = V_P$ = 3.0 V, $V_{DO} = V_P/2$ $(|I_{DO(85°C)} - I_{DO(-40°C)}| /2) / (|I_{DO(85°C)} + I_{DO(-40°C)}| /2) \times 100(\%)$ (Applied to each I_{DOL}, I_{DOH})



■ FUNCTIONAL DESCRIPTION

1. Pulse Swallow Function

The divide ratio can be calculated using the following equation:

$f_{VCO} = [(M \times N) + A] \times f_{OSC} \div R \ (A < N)$

- f_{VCO} : Output frequency of external voltage controlled oscillator (VCO)
- N : Preset divide ratio of binary 11-bit programmable counter (3 to 2,047)
- A : Preset divide ratio of binary 7-bit swallow counter ($0 \leq A \leq 127$)
- f_{OSC} : Output frequency of the reference frequency oscillator
- R : Preset divide ratio of binary 14-bit programmable reference counter (3 to 16,383)
- M : Preset divide ratio of modulus prescaler (32 or 64)

2. Serial Data Input

Serial data is processed using the Data, Clock, and LE pins. Serial data controls the programmable reference divider and the programmable divider separately.
Binary serial data is entered through the Data pin.
One bit of data is shifted into the shift register on the rising edge of the Clock. When the LE signal pin is taken high, stored data is latched according to the control bit data as follows:

Table 1. Control Bit

Control bit (CNT)	Destination of serial data
H	For the programmable reference divider
L	For the programmable divider

(1) Shift Register Configuration

Programmable Reference Counter

LSB ↓ Data Flow → ↓ MSB

CS	Current value
H	±6.0 mA
L	±1.5 mA

Table 7. LD/fout Output Select Data Setting

LDS	LD/f_{OUT} output signal
H	fout signal
L	LD signal

(2) Relation between the FC Input and Phase Characteristics

The FC bit changes the phase characteristics of the phase comparator. Both the internal charge pump output level (D_O) and the phase comparator output (ϕR, ϕP) are reversed according to the FC bit. Also, the monitor pin (f_{OUT}) output is controlled by the FC bit. The relationship between the FC bit and each of D_O, ϕR, and ϕP is shown below.

Table 8. FC Bit Data Setting (LDS = "H")

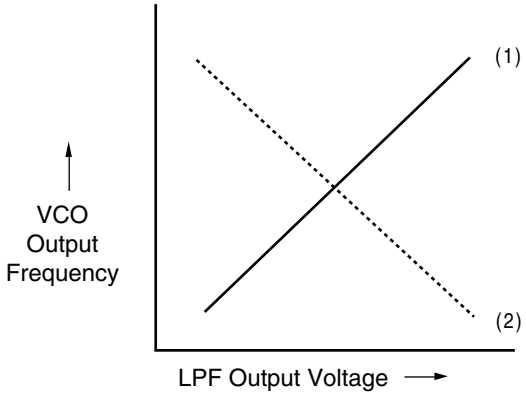
	FC = High				FC = Low			
	D_O	ϕR	ϕP	LD/fout	D_O	ϕR	ϕP	LD/fout
fr > f_P	H	L	L	fout = fr	L	H	Z*	fout = fp
fr < f_P	L	H	Z*		H	L	L	
fr = f_P	Z*	L	Z*		Z*	L	Z*	

* : High-Z

When designing a synthesizer, the FC pin setting depends on the VCO and LPF characteristics.

* : When the LPF and VCO characteristics are similar to (1), set FC bit high.

* : When the VCO characteristics are similar to (2), set FC bit low.



3. Do Output Control

Table 9. ZC Pin Setting

ZC pin	Do output
H	Normal output
L	High impedance

4. Power Saving Mode (Intermittent Mode Control Circuit)

Table 10. PS Pin Setting

PS pin	Status
H	Normal mode
L	Power saving mode

The intermittent mode control circuit reduces the PLL power consumption.

By setting the PS pin low, the device enters into the power saving mode, reducing the current consumption. See the Electrical Characteristics chart for the specific value.

The phase detector output, Do, becomes high impedance.

For the signal PLL, the lock detector, LD, remains high, indicating a locked condition.

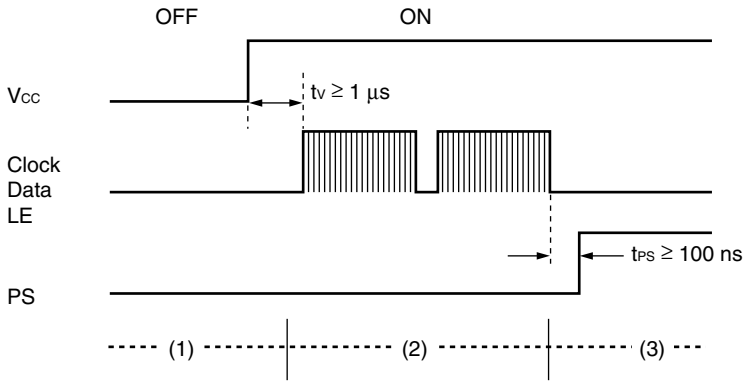
Setting the PS pin high, releases the power saving mode, and the device works normally.

The intermittent mode control circuit also ensures a smooth startup when the device returns to normal operation. When the PLL is returned to normal operation, the phase comparator output signal is unpredictable. This is because of the unknown relationship between the comparison frequency (fp) and the reference frequency (fr) which can cause a major change in the comparator output, resulting in a VCO frequency jump and an increase in lockup time.

To prevent a major VCO frequency jump, the intermittent mode control circuit limits the magnitude of the error signal from the phase detector when it returns to normal operation.

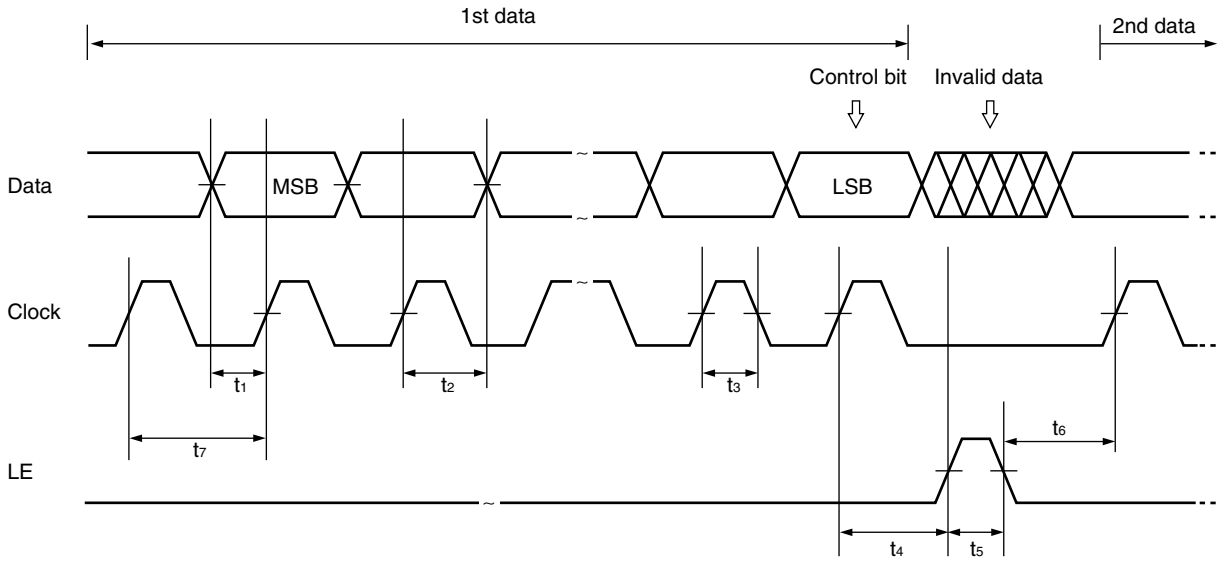
When power (V_{CC}) is first applied, the device must be in standby mode, PS = Low, for at least 1 µs.

Note : PS pin must be set “L” for Power-ON.



(1) PS = L (power saving mode) at Power ON
(2) Set serial data 1 µs later after power supply remains stable ($V_{CC} \geq 2.2$ V).
(3) Release power saving mode (PS: L → H) 100 ns later after setting serial data.

■ SERIAL DATA INPUT TIMING



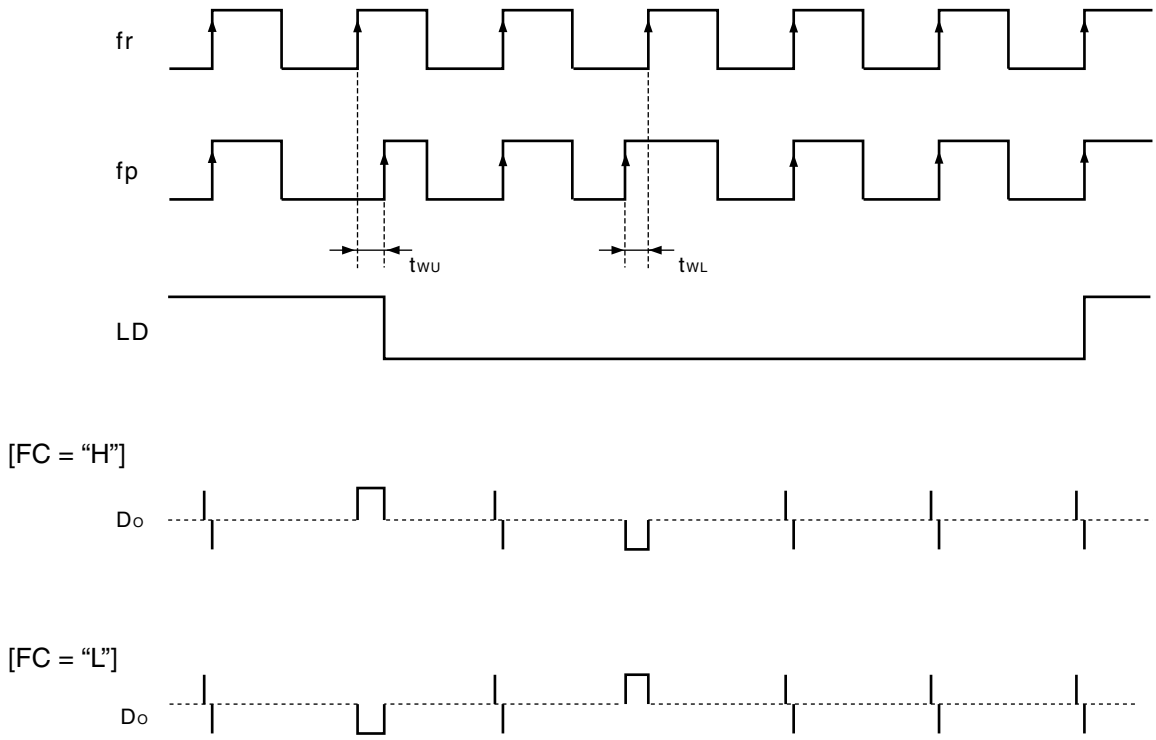
On the rising edge of the clock, one bit of data is transferred into the shift register.

Parameter	Min	Typ	Max	Unit
t_1	20	–	–	ns
t_2	20	–	–	ns
t_3	30	–	–	ns
t_4	30	–	–	ns

Parameter	Min	Typ	Max	Unit
t_5	100	–	–	ns
t_6	20	–	–	ns
t_7	100	–	–	ns

Note : LE should be “L” when the data is transferred into the shift register.

■ PHASE COMPARATOR OUTPUT WAVEFORM



Notes :
- Phase error detection range: -2π to $+2\pi$
- Pulses on Do signal during locked state are output to prevent dead zone.
- LD output becomes low when phase is t_{WU} or more. LD output becomes high when phase error is t_{WL} or less and continues to be so for three cycles or more.
- t_{WU} and t_{WL} depend on OSC_{IN} input frequency.
  $t_{WU} \geq 2/fosc$ (s) (e. g. $t_{WU} \geq 156.3$ ns, fosc = 12.8 MHz)
  $t_{WU} \leq 4/fosc$ (s) (e. g. $t_{WL} \leq 312.5$ ns, fosc = 12.8 MHz)
- LD becomes high during the power saving mode (PS = "L").

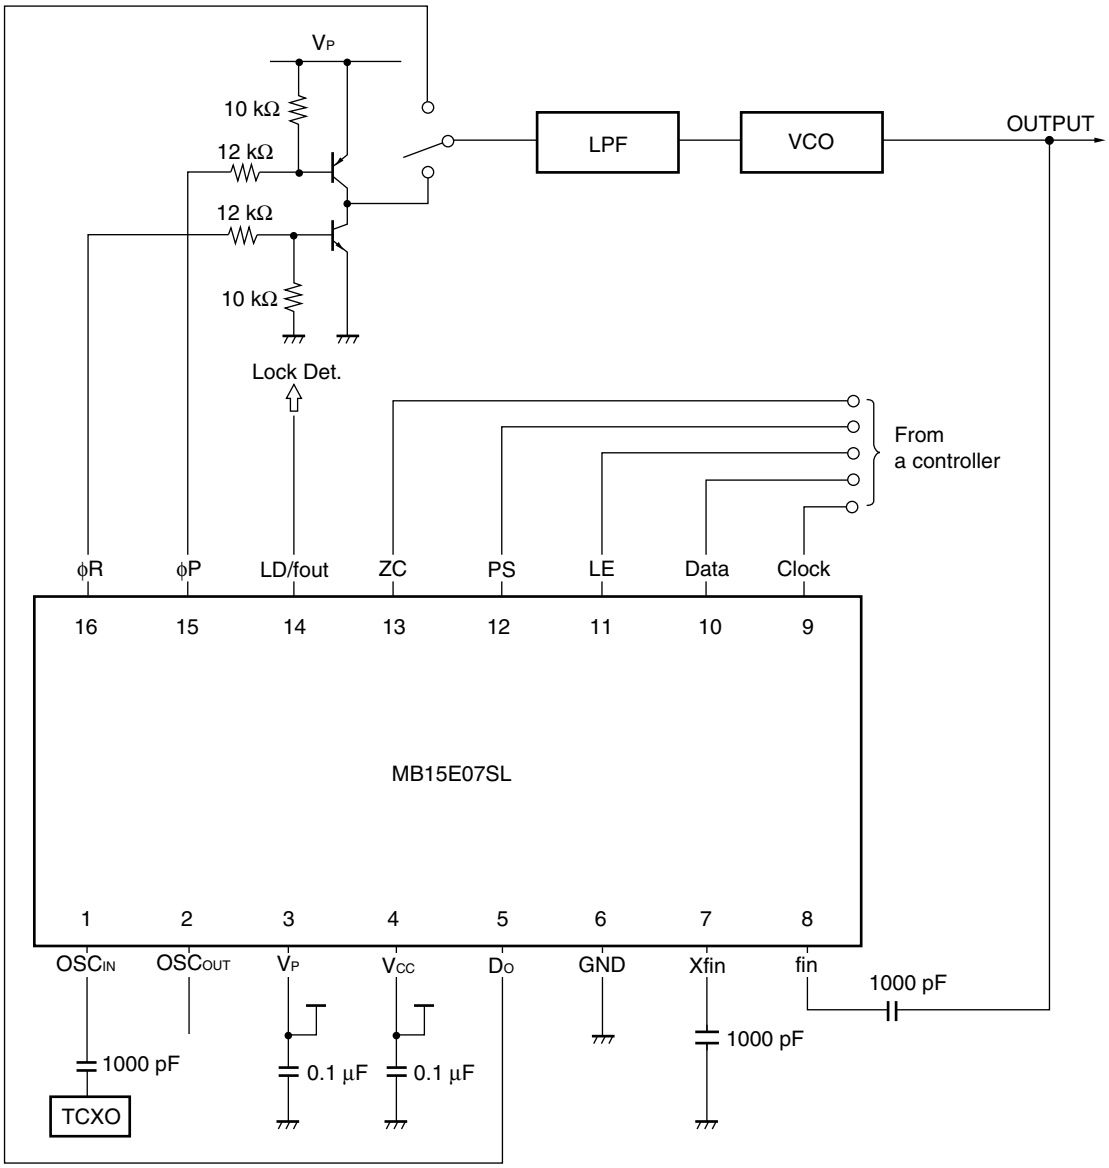
■ APPLICATION EXAMPLE



V_P: 5.5 V Max

Notes :
- SSOP-16
- In case of using a crystal resonator, it is necessary to optimize matching between the crystal and this LSI, and perform detailed system evaluation. It is recommended to consult with a supplier of the crystal resonator. (Reference oscillator circuit provides its own bias, feedback resistor is 100 kΩ (Typ).)

■ USAGE PRECAUTIONS

To protect against damage by electrostatic discharge, note the following handling precautions:
-Store and transport devices in conductive containers.
-Use properly grounded workstations, tools, and equipment.
-Turn off power before inserting device into or removing device from a socket.
-Protect leads with a conductive sheet when transporting a board-mounted device.
